Inner Rail

1 **Slide Rail Structure**
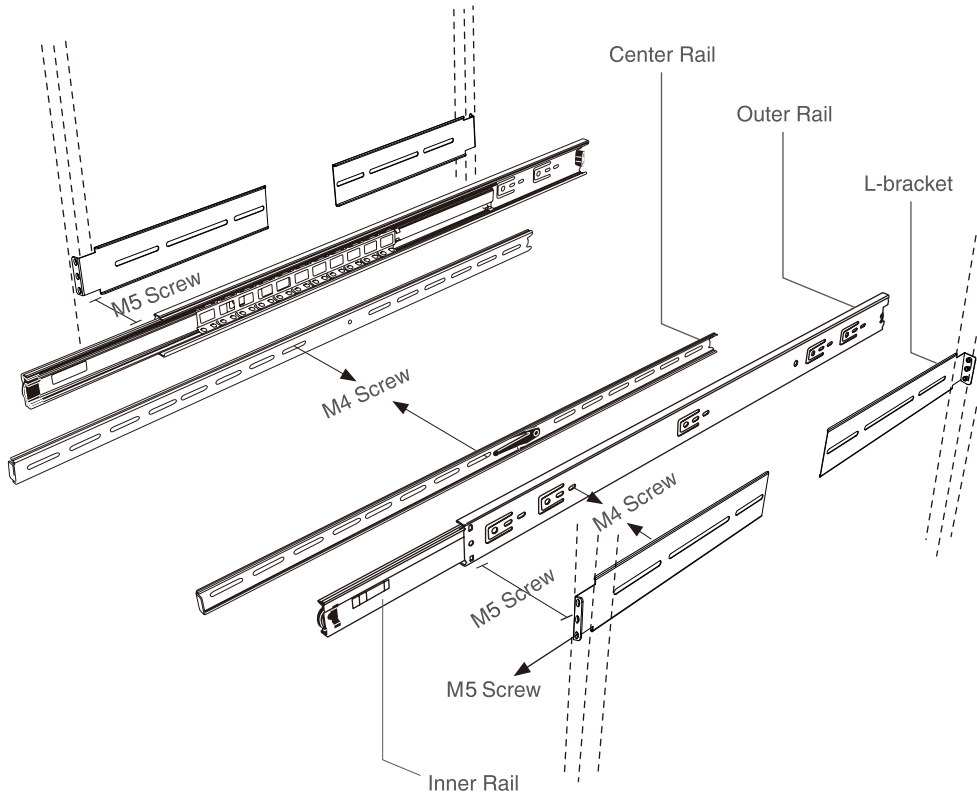

R3 Outer Rail

R1 Center Rail
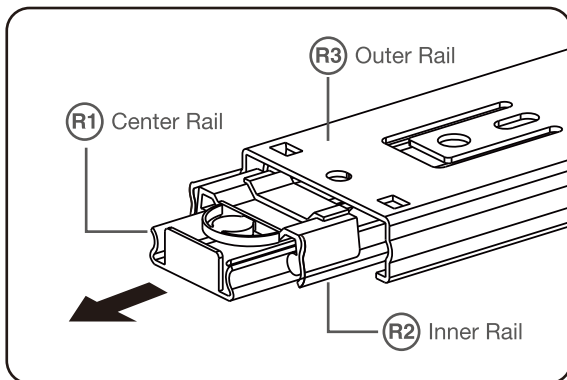

R2 Inner Rail
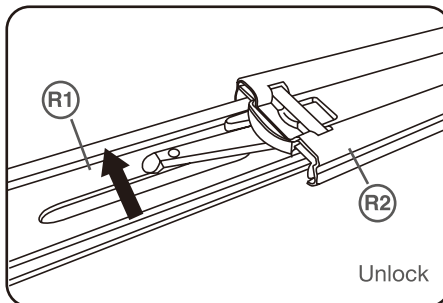

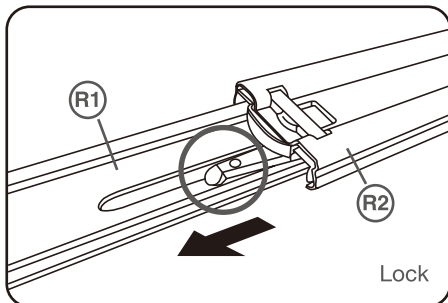

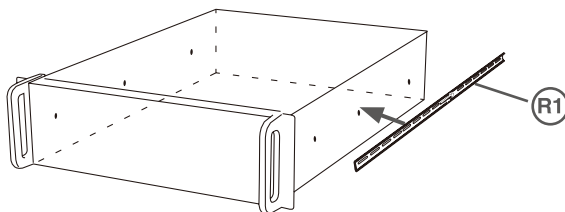

The slide rail is consist of three rails: R1 Center Rail, R2 Inner Rail, R3 Outer Rail

2 **Separating the Center Rail**

R1

R2

Lock

R1

R2

Unlock

Pull R1 all the way out to its maximum slide position. Locate and release the locking lever by sliding it upward. This will release R1 from R2.
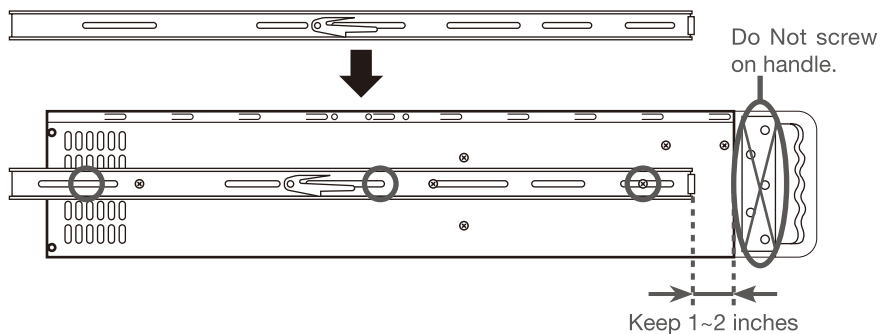

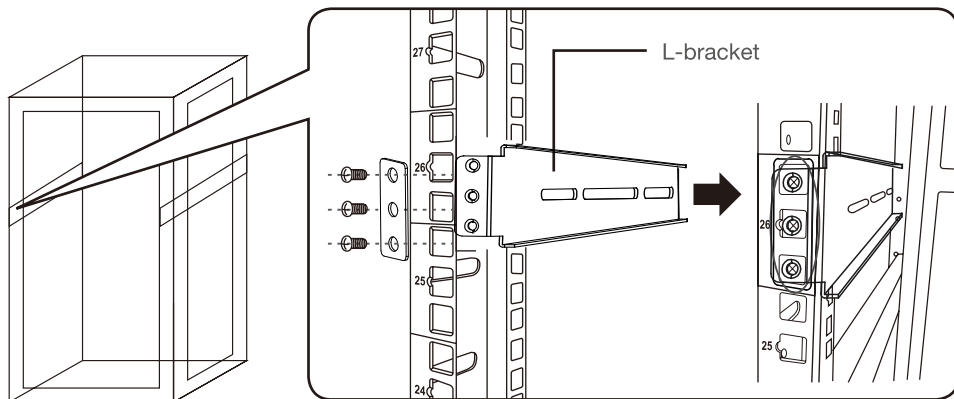

③ Installing the Center Rail

R1

Place and align ⓡ₁ with mounting points on the server chassis and install it using
M4 Screw pack .

Note: 1. Do not screw on the handles.
        2. If installing the center rail onto a 2U server chassis, keep the rail 1 to 2 inches
        away from the handles for better fitments.

Do Not screw
on handle.

Keep 1~2 inches

④ Installing the L-Bracket

L-bracket

Install the L-bracket on the cabinet frame using M5 Screw Pack &M5 Washer.
Note: Please make sure to tighten all the screws until they are snug. Do not over tighten.
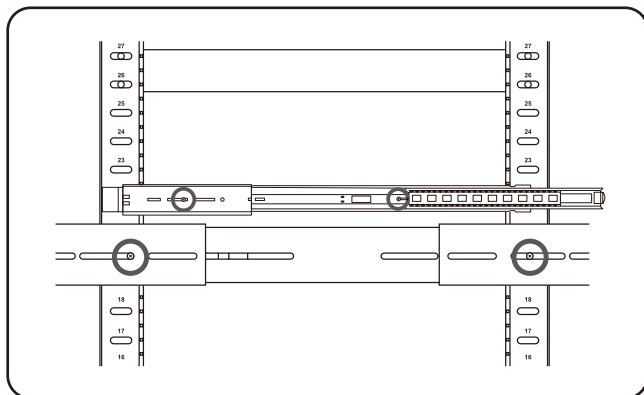

⑤ Installing the Slide Rail

Align and slide the tip of the slide rail (R2 + R3) into the L-bracket between the two arrows.

Install the outer rail R3 on to the L-bracket using M4 Screw pack .
Now the L-bracket, R2 and R3 should be well installed on the rack.

Repeate the step 2 through 5 to install another outer rail.

6 Installing the Chassis

TEAM LIFT

Slide the server chassis into position by aligning and sliding R1 onto the slide rail (R2 and R3) on the rack.

Note: Installation is suggested to be accomplished by two persons each lifting one side of the chassis for easier aligning the chassis with the slide rail when sliding the chassis onto the rack.
