

PRODUCT OVERVIEW

Product Diagram

Dimensions: 15.75" x 14.84" x 18.17" (W x H x D)

Accessory Kit

x8

A small Phillips-head screw with a hexagonal base.

Screw-A (6-32 x 6 mm)

PSU/Bracket

x8

A small Phillips-head screw with a hexagonal base.

Screw-B (M3 x 5 mm)

ODD

x35

A small Phillips-head screw with a hexagonal base.

Screw-C (6-32 x 6 mm)

Motherboard

x48

A small Phillips-head screw with a hexagonal base.

Screw-D(KM 3x6mm)

2.5" SSD

x48

A small Phillips-head screw with a hexagonal base.

Screw-E(6-32x8mm)

3.5" HDD

x5

Pre-installed +5

A metal standoff with a hexagonal base and a threaded top.

Standoff

Motherboard

x6

A long, thin, flexible cable tie with a hook at one end.

Cable Tie

Cable Management

x1

A small, rectangular rubber stand.

Rubber Stand

x6

A SATA data cable with a SATA connector at one end and a SATA-to-USB adapter at the other.

SATA

INSTALLATION GUIDE

Please remove all packaging materials before proceeding to disassembly/assembly.

1. Removing the Top & Side Panel

- Tools Required: None.
- Procedure:
 1. Ensure the chassis is powered off and disconnected from any power source.
 2. If secured by screws, unscrew the fasteners at the rear edge of the side panel.
 3. Grip the panel handle or edge and slide it directly backwards to remove it.
- Note: Handle the panel carefully to avoid scratching. The process for the opposite side panel is identical.

1

2. Installing the Power Supply Unit (PSU)

- Tools Required: Phillips screwdriver.
- Procedure:
 1. Orient the PSU so that its fan grill faces the intended ventilation opening (typically downwards or towards the rear of the chassis).
 2. Slide the PSU into the dedicated PSU bay from the interior of the chassis until it is flush with the rear of the chassis.
 3. Align the four mounting holes on the PSU with the holes on the chassis bracket.
 4. Secure the PSU using the four screws provided in the chassis screw package.
- Note: Connect power cables only after the PSU and all major components are securely installed.

2

3. Installing a Second PSU: Removing Fan and PSU Bracket (Optional)

- Tools Required: Phillips screwdriver.
- Procedure:
 1. To access the secondary bay, first remove any fan mounted in this location by disconnecting its power cable and unscrewing it.
 2. If a metal bracket covers the PSU opening, remove the screws securing it and set the bracket aside.
 3. Follow the standard PSU installation procedure (Step 2) to install the second PSU in the now-accessible bay.

4. Installing the Motherboard

- Tools Required: Phillips screwdriver.
- Procedure:
 1. Place the chassis on its side.
 2. Compare the motherboard's mounting holes with the pre-installed standoffs in the chassis. Install additional standoffs if required for your motherboard form factor (ATX, microATX, ITX, etc.).
 3. Carefully lower the motherboard into the chassis, aligning its rear I/O shield with the corresponding chassis cutout and its screw holes with the standoffs.
 4. Secure the motherboard using the appropriate screws from the screw package. Do not overtighten.

5. Removing Rear Window Cover and PCI Slot Covers

- Tools Required: Phillips screwdriver
- Procedure:
 1. Rear Window/Fan Grill: If present, remove any screws securing the rear exhaust cover or fan grill. It may simply pop out or slide free.
 2. PCI Slot Covers: For each expansion card you plan to install, you must remove the corresponding metal cover (PCIe slot cover) from the rear of the chassis. These are typically held by a single screw or a tool-less latch. Remove the necessary number of covers.
- Note: Keep the spare covers in case you need to cover unused slots in the future.

6. Installing a Graphics Card

- Tools Required: Phillips screwdriver.
- Procedure:
 1. Locate the appropriate PCIe x16 slot on the motherboard (usually the top one).
 2. Remove the corresponding PCI slot cover(s) from the chassis rear (see Step 5).
 3. Align the graphics card's connector with the PCIe slot and its bracket with the opening in the chassis.
 4. Press down firmly and evenly on the card until it is fully seated in the slot. You should hear a click if the slot has a retention latch.
 5. Secure the card's bracket to the chassis using the screw from the removed PCI slot cover or a new one from the screw package

7. Opening the Flip Door with a Key

- Tools Required: Provided key.
- Procedure:
 1. Locate the keyhole on the front or side of the flip door panel.
 2. Insert the key and turn it to unlock the mechanism.
 3. The door can now be opened, providing access to front drive bays, I/O ports, or fan filters.
- Note: Always lock the door after maintenance if security or dust prevention is desired.

7

8. Removing the Tray / Installing a 3.5" HDD

- Tools Required: Phillips screwdriver.
- Procedure:
 1. Removing the Tray: To install a 3.5" hard drive, first extract the HDD tray from the drive bay. This may involve pressing a release latch or simply pulling on a handle.
 2. Mounting the HDD: Place the hard drive into the tray, aligning its side screw holes with the posts or holes on the tray. Secure it using the provided screws (usually four, two on each side).
 3. Re-inserting the Tray: Slide the populated tray back into the designated drive bay until it clicks or locks into place.
 4. Connect the SATA data and power cables to the drive.

8

9. Removing the Dual 5.25" Bracket

- Tools Required: Phillips screwdriver.

- Procedure:

1. Refer to the image for the location of the Dual 5.25" bracket.
2. From the interior of the chassis, locate the screws or latches securing the bracket to the chassis frame.
3. Remove the fasteners and carefully slide the bracket out of its bay.
4. If installing an optical drive or other 5.25" drive, mount it into this bracket using the side screws, then re-install the bracket into the chassis.

10. Installing 360mm Radiator on Left/Right Side

- Tools Required: Phillips screwdriver, thermal paste (if installing a new CPU cooler).
- Procedure:
 1. Determine the intended mounting location (left or right side panel interior) based on chassis design and component clearance. You may need to remove the side panel first.
 2. If necessary, remove any pre-installed fans or brackets (like the ODD bracket from Step 9) from the area to make room.
 3. Position the 360mm radiator against the mounting points, ensuring the tubing can be routed conveniently to the CPU water block and the fans have adequate clearance.
 4. Secure the radiator using the long screws provided with your All-in-One (AIO) liquid cooler, passing through the fan (if fans are mounted to the radiator) and into the radiator's threaded holes.
 5. Attach fans to the radiator (if not pre-attached) for push or pull configuration.
 6. Connect the fan and pump power cables to the appropriate headers on the motherboard.

I/O PANEL

SPECIFICATIONS

Model	
Model Name	Hearth NAS MAX
Specifications	
Motherboard Compatibility	E-ATX / ATX / Micro ATX and below
Color	Black
Internal 5.25" Drive Bays	2
Internal 3.5" Drive Bays	6
Internal 2.5" Drive Bays	6
Expansion Slots	8
Front Ports	1 x USB 3.1 Type-C / 1 x USB 3.0 / Audio
Fan Options	Front: 2x120mm(pre-installed) Rear: 3x120mm(pre-installed) Left: 3x120mm Right: 3x120mm Bottom: 2x120mm
Radiator Options	Side: 240mm 360 mm
Max GPU Length	390 mm
Max CPU Cooler Height	160 mm
Max PSU Length	220 mm
